

Endangered & Extinct

Notebooking Pages

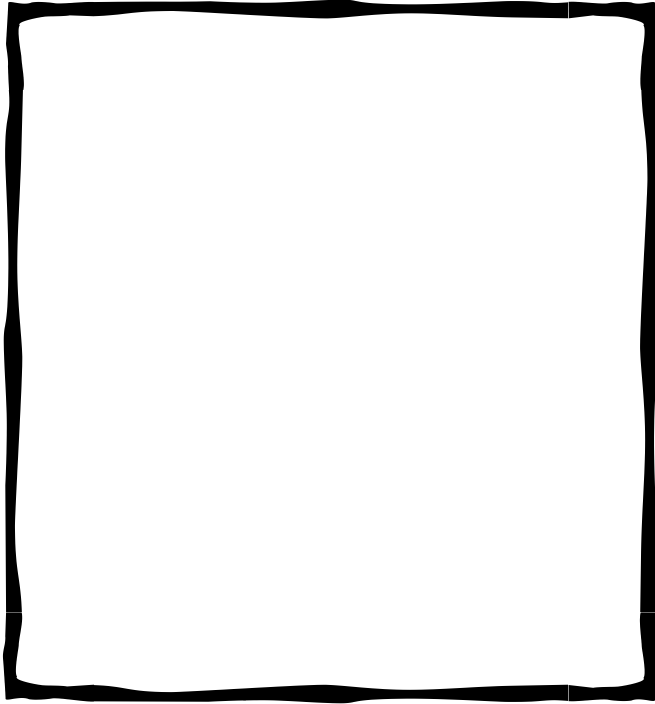

These pages were designed to go with [Almost Gone by Steve Jenkins](#). You can choose another source, if desired. Older students should be encouraged to read multiple sources before completing the pages. We checked out a stack of books from the library (about endangered, threatened, extinct, and protected animals). My son sifted through the resources and used various books for different animals.

Your student can use just a few of these (to supplement a unit such as [The Lorax](#)), or he can completed the entire packet if you want to do an entire unit on endangered and extinct animals.
